MILGUARD OCEAN™

High Performance Footwear Components
Featuring Reprocessed Fishing Nets

Turning 'ghost nets' from a horror show into a Triple A rated film

Building on 30 years recycling experience we have developed Milguard Ocean™, a unique, high performance, environmental multi-laminate film which tackles the problem of 'ghost nets' head on.

First we harvest end of life nets from fishing quays. By giving the nets a reuse value, we encourage their responsible disposal. Next we incorporate the nets in a closed loop patented process together with other waste to form 60% of the reinforcement's core.

The resulting film is rated triple A for resilience and shape retention – wet and dry. It is easy to process in shoe production, yet gives high performance and outstanding properties in wear.

Talk to us about incorporating Milguard Ocean™ into your manufacturing. By working together, every shoe will represent one small step in the direction of the circular economy, where redundant material finds a valuable second life.

Jessica Good, of **Shoedesign.co.uk**
Susannah Davda of **The Shoe Consultant**

We will talk about how we can bring back manufacturing to the city, from maker spaces for young sneaker designers to sample rooms for big brands, high-tech micro factories that supply the local market and even in-store manufacturing. Having access to materials and other supplies will be essential in all scenarios, so that is why we all feel this is a very relevant topic to discuss at the first edition of the Materials Show in Europe!

CLEAN

Moo-ve over cows. Pigs are naturally cleaner than cattle. They use less land and less water to raise. They produce 1/400th less methane. And leather, as a by-product of the food chain, adds no additional carbon or environmental footprint to the world when tanned responsibly.

GREEN

Our Horizon Leather is tanned without chromium, without salts, without animal dyes. At the end of its useful life, it biodegrades harmlessly into the environment. Plus, pigskin nubuck provides a richness and a depth that enhances and elevates any footwear style.

GOLD

We invented pigskin nubuck tanning over 60 years ago, an innovation in itself. In the decades that have followed, we've struck gold again and again with new textures, technologies, enhancements and benefits. Breathability. Water resistance. And the richest color absorption of any leather.

GLOBAL

LWG "Gold Standard" tanneries produce the highest quality leathers with the most environmentally conscious technology. Wolverine Leathers are tanned in five "Gold Standard" tanneries around the globe, putting product closer to footwear hubs to further reduce environmental impact.

KTM USA, LLC

Trudy Seroussi: trudy@jacleather.com

Booth: 208

US

910-777-1875

Khawaja Tanneries (KTM) is now under the management of the 4th Generation for the production of cow and buffalo leathers. The tannery, under our highly qualified technicians have become very experienced in creating many of the oiled and waxed effect leathers that is synonymous with the American lifestyle. Several of our leathers use the original ""hot stuffing"" techniques developed by the American tanners in the 1970's and 1980's, and all of our oils and waxes are imported directly from the USA and Europe. Consequently, we can offer a wide range of Full Grain and Corrected - Grain leathers to suit most of the Footwear Brands.

We are constantly upgrading our tannery with new machinery and the latest technology and this year have constructed a 100% re-usable Water Treatment plant, as we will be LWG accredited by the end of 2018.

Being a pioneer in the tanning industry in Pakistan, the decision was to make our leathers a symbol of quality with production of 1.5 million sf per month. We at KTM believe that leather is both an art and a science!!
